

Building your new website, **step by step**

Think of it like opening a new office. Here's what's built, what's being connected, and where we are right now.

OVERALL PROGRESS

2 OF 4 DONE

THE FOUR PIECES

Everything below has to be in place for the full site to go live under Manifest's name.

1

THE OFFICE FIT-OUT

Your website

The whole site is designed and built — every page, on brand, ready to click through. You can see it live right now on a preview link.

● BUILT & VIEWABLE

samsteve159.github.io/Real_Estate_web

2

THE POWER ACCOUNT, IN YOUR NAME

Manifest's AI account

The smart tools (instant valuation + the AI assistant) run on AI that costs money per use. We've set up an account **in Manifest's name** so that usage is billed and tracked to you — never mixed in with anyone else's.

Already switched on and tested — the tools work.

● SET UP & TESTED

3

THE PREMISES + CONNECTING THE POWER

Hosting (GoDaddy)

The site is on a temporary preview address for now. Moving it onto **Manifest's own hosting** is the step that puts it on your real domain *and* switches the smart tools ON for the public — right now they only run behind the scenes.

● NEXT UP

4

STOCKING THE SHELVES

Your live Vault listings

Connecting Vault so every listing you create appears on the website automatically — no double-handling. Registration with Vault is underway; it needs one quick 30-second step from you once we're approved.

● IN MOTION

WHAT YOU CAN SEE TODAY VS. AT LAUNCH

The preview link is real — here's exactly what does and doesn't work on it yet.

✓ WORKS ON THE PREVIEW NOW

- › The full website & every page
- › Stamp duty calculator
- › Borrowing power calculator
- › Rental yield & portfolio tools
- › First-home-buyer guide

🕒 SWITCHES ON AT LAUNCH

- › Instant home valuation
- › AI buyer assistant (chat)
- › Enquiry & report capture
- › Live listings from Vault
- › Your own domain name

WHY THE SMART TOOLS AREN'T ON THE PREVIEW YET

The valuation & AI assistant are built and working — here's why they only switch on at launch.

Think of the preview link like a **noticeboard** — perfect for pinning up the pages so you can see them. The smart tools need an **office with staff behind the desk** who can actually answer questions. That's what the hosting step (piece 3) adds.

- › The calculators do their maths right inside the web page, so they work anywhere — no "staff" needed.
- › The valuation & AI assistant have to talk to an AI service. For that to be safe, the request goes through **Manifest's own secure server** — so the AI key stays private and the cost is billed to you, never exposed in the public webpage.
- › A free preview host can only show pages — it can't run that secure server. Real hosting can. Flip that on, and the tools go live to the public.

TWO SMALL THINGS FROM YOU

Nothing urgent — just so you know what's coming your way.

1 The Vault token

Once Vault approves me as your developer, you click "Add Token" and send it over. ~30 seconds. (Details in my message.)

2 Hosting under Manifest

A GoDaddy hosting account in Manifest's name — this is what lets us flip the whole thing live on your domain.
